

## THE BIG FIVE IN YOUR HOME

Visitors to game parks must adhere to safety measures advocated by the park to ensure their safe travel through areas populated by “dangerous” animals. “Dangerous animals” are lurking unsuspectingly in many homes, yet few, if any, safety measures are followed.

Daily, some of the most toxic substances, contained in household cleaning products, are being absorbed through the skin and lungs and can accumulate in the central nervous system, tissues and organs. Slowly the body becomes toxic increasing the risk of facing the world’s two biggest “killers”, namely cancer and cardiovascular disease. Continued exposure to poisons in the many detergents may result in other health problems such as asthma, allergies, seizures, depression, blindness and compromised immune, reproductive, hormonal and nervous systems.

It is naïve to believe that unsafe products would find their way onto supermarket shelves as the message from warnings on labels of most home care products is clear – cleaning products are dangerous!

Each use of a toxic speciality cleaner and every discarded plastic container increases the environmental burden. Protect your health and the environment by introducing “The Big Five” into your home – Green (biodegradable), Non-toxic, and Low Dosage, concentrated, multi-purpose, earth-friendly products formulated to deliver maximum cleaning performance safely and naturally from a minimum of product. Recent estimations show that these products have prevented over 450 million bottles from being dumped into landfills!

The non-flammable, non-volatile, ALL PURPOSE CLEANER with renewable plant-based fatty acids, mild organic solvents and gentle, yet powerful, surfactants, penetrate, dissolve and emulsify the toughest grit and grime. The versatility of this product extends from cleaning a dirty car engine to removing red wine from a silk blouse reducing the number of speciality products and making it very cost effective. It can be used on almost any surface on which water can be used, leaves no soap residue and is safe for use with septic tanks.

The LIGHT DUTY CONCENTRATE is dramatically effective for anything needing extra special care. It was used to clean 25,000 oil-soaked penguins in Cape Town in the largest wildlife rescue operation in history yet it is gentle enough to bath a baby. It softens the water making it perfect for sensitive skins and an excellent hand cleaner, working effectively in hot or cold water and even seawater. The almost endless list of uses includes washing dishes or fine garments by hand and removing oil-based sprays, poisons and dirt from fruit and vegetables.

The bacteria can be taken CARE of with the CONCENTRATED DISINFECTANT that is naturally fully biodegradable, safe and friendly for humans but deadly for germs. Tests conducted by SABS show that a 1 to 50 dilution of the disinfectant will eliminate 99.9% of bacteria commonly found in the home environment within a contact period of only 5 minutes.

No more washday blues with the superior LAUNDRY COMPOUND, that washes away a variety of dirt from a variety of textiles leaving garments soft, clean and bright. It can be used in different temperatures, in hard or soft water, in different washing machines or for washing by hand. This effective, non-polluting detergent extends the life of garments and washing machines.

The controlled release of oxygen bound up in OXYGEN BLEACH causes the natural cleaning action of oxidation to attack soils and stains on garments lifting them into the wash water, thus protecting fabrics and enhancing colours and whites.

ENJOY A CLEANER, SAFER AND HEALTHIER HOME AND ENVIRONMENT
